Fox River Status Update June 2, 2021

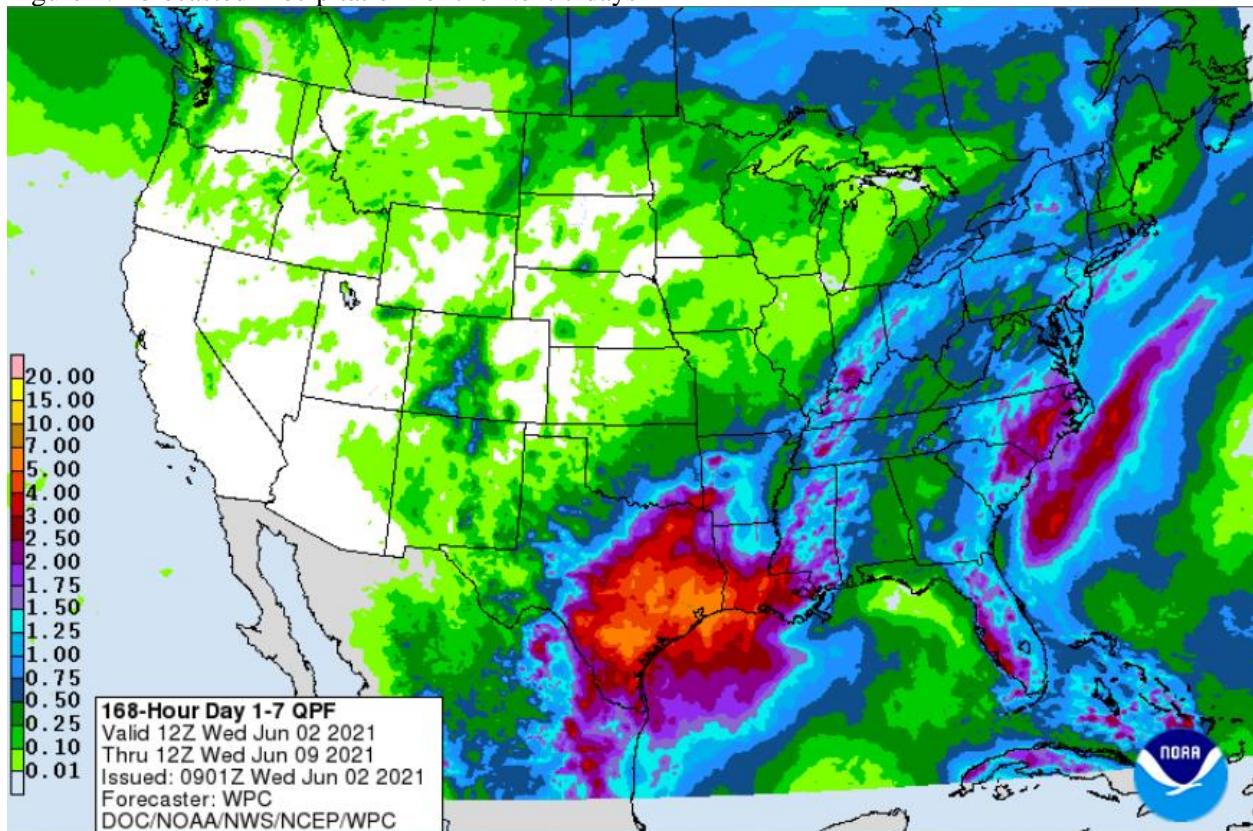

Current Conditions

Measured inflows on the Fox River near New Munster, WI are 347 cfs; flows on Nippersink Creek near Spring Grove are 71 cfs. The Fox Lake stage is 4.09 ft; the Stratton Dam Tailwater stage is 0.67 ft. The Fox River at the Algonquin Dam Tailwater stage is 4.82 ft.

Forecast

The National Weather Service (NWS) is predicting 0.01” to 0.1” of precipitation for the next 7 days in the Fox River watershed as shown on Figure 1.

Figure 1: Forecasted Precipitation for the Next 7 days

Summer Pool/Boating Outlook

The current stage at the Fox Lake near Lake Villa is 4.09 ft. The boating outlook in the Chain of Lakes is looking good for the remainder of the week as well as for the weekend. The Fox River is in a moderate drought and as a result, flows on the lower river are lower than expected. As the NWS forecast is predicting very little precipitation for the next week, the low flows in the lower river seem to persist. The IDNR/OWR will closely monitor the precipitation forecasts by the NWS and will make gate setting changes, as necessary, to minimize potential rainfall impacts.
